

Memory Intensive

1. Difference between first & second for loop is in first loop all assign value is 0 and in second for loop assign value is 5.
2. 17 pages are allocated for matrix
3. First loop performs better
4. If number of row increases allocation size will be increased and iteration will also increase in both the loops.
5. If number of column increases allocation size will be increased and iteration will also increase in both the loops.
